Use Case 4: View Saved Timelines .....	8
Use Case 5: Display a Timeline .....	9
Use Case 6: Create Event.....	10
Use Case 7: Edit Event.....	11

# INTRODUCTION

---

## Description of the Application

The ~~History~~ **Timeline** App is a user-friendly, interactive application designed to help people explore historical events in an ~~more~~ **integrated** and accessible way. ~~At its core,~~ the app lets users view, compare, and interact with historical timelines, offering a visual and customizable approach to learning about the past.

Events are stored in an ~~integrated~~ **connected** database, allowing users to search for key historical moments, create and manage entries, and explore timelines based on themes, periods, or event types.

## Purpose of This Design Document

The purpose of this ~~design~~ document is to define the **design details** goals, **and** functionality, ~~and system requirements~~ of the ~~History~~ **Timeline** App. It serves as a ~~clear and~~ shared reference point for the development team, designers, and stakeholders throughout the ~~planning and building~~ **implementation phase of the project process**.

By outlining the app's core features, ~~user needs,~~ technical components, and performance expectations, this document ensures that everyone involved in the project has a mutual understanding of what the application will do, **and** how it will work, ~~and why it matters~~.

## What This Document Contains

This design document includes the following sections:

- Introduction, including a high-level overview of ~~what the History Timeline App is and who it's for.~~
- A design level class diagram including pseudocode for each class.
- Statechart diagrams for each class
- Design level sequence diagrams for each use case identified in the System Requirements Document

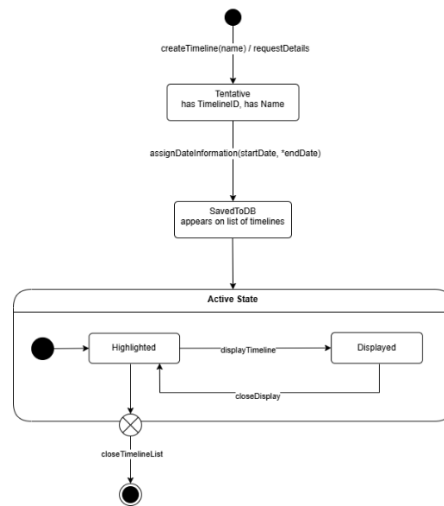

## DESIGN LEVEL CLASS DIAGRAM

Refine your Class Diagram from your Analysis phase to contain the following additional information:

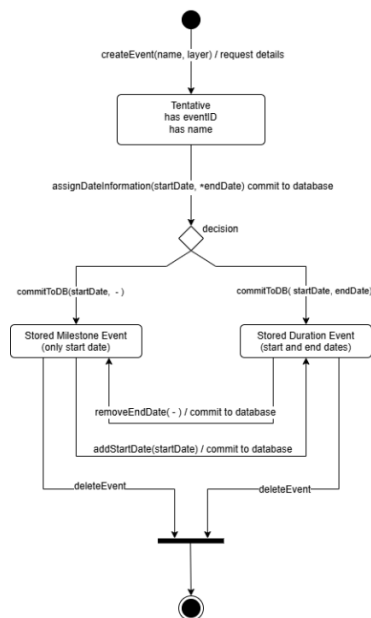

- Attributes: data types, initial values, range of values (if appropriate)
- Methods: return types, parameters
- Pseudocode for each method

# STATECHART DIAGRAMS

## TIMELINE CLASS

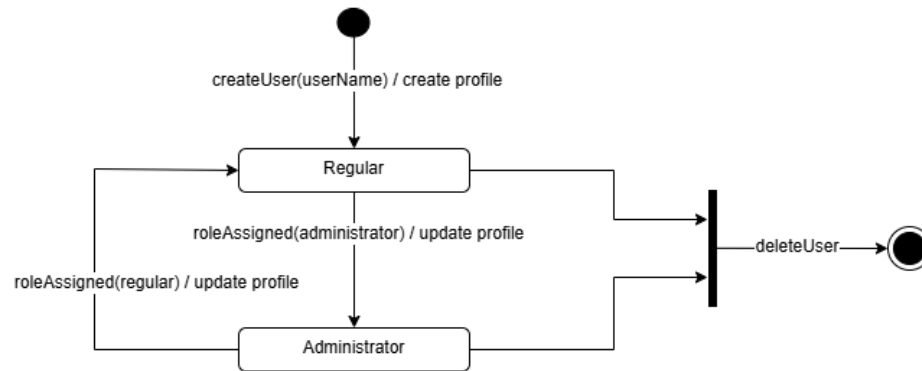

## EVENT CLASS

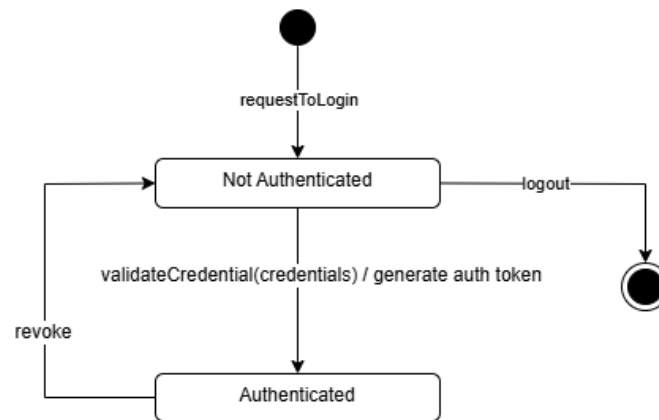

## VISUALIZATION CLASS

## USER CLASS

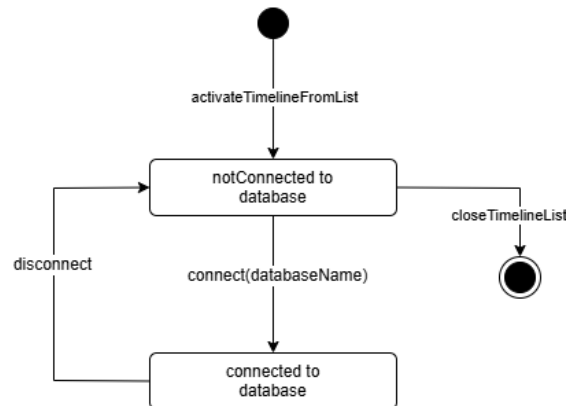

## AUTHENTICATION CLASS

## DATABASEMANAGER CLASS

---

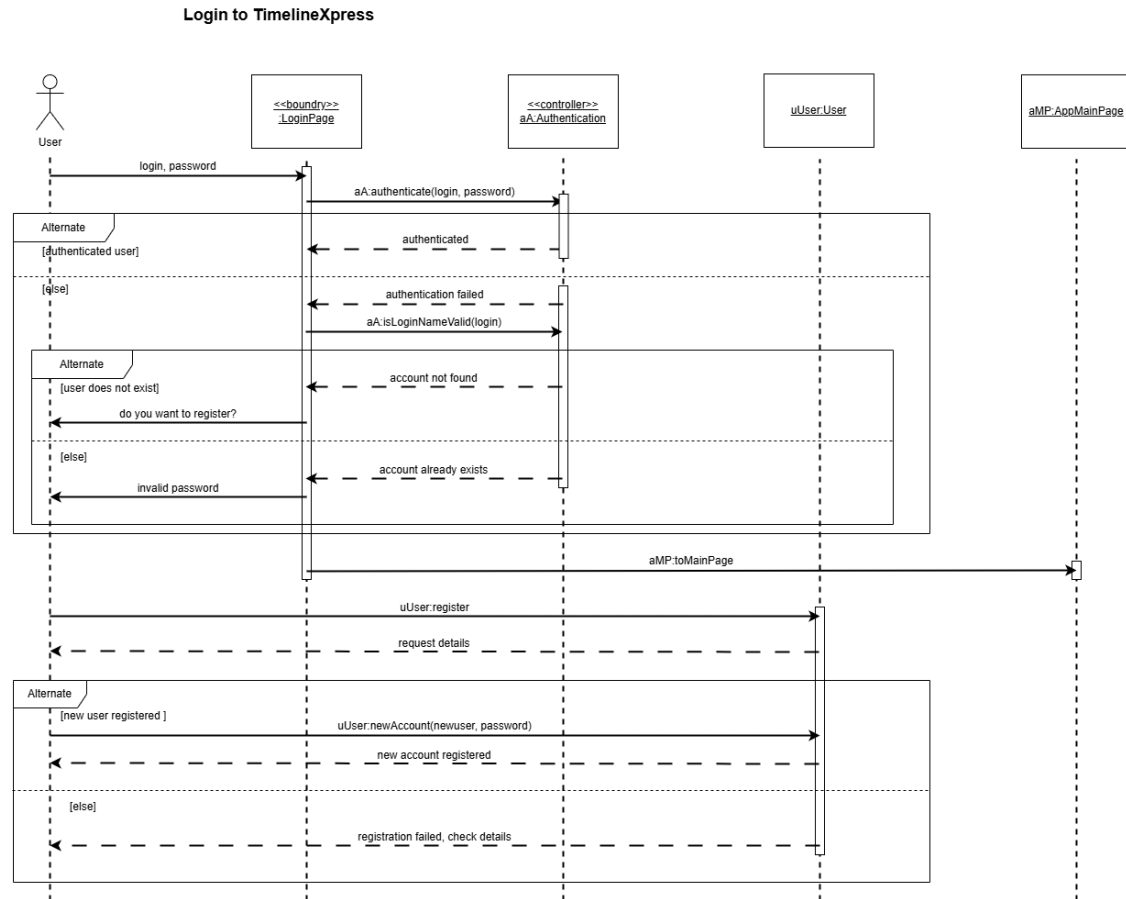

## SEARCHENGINE CLASS

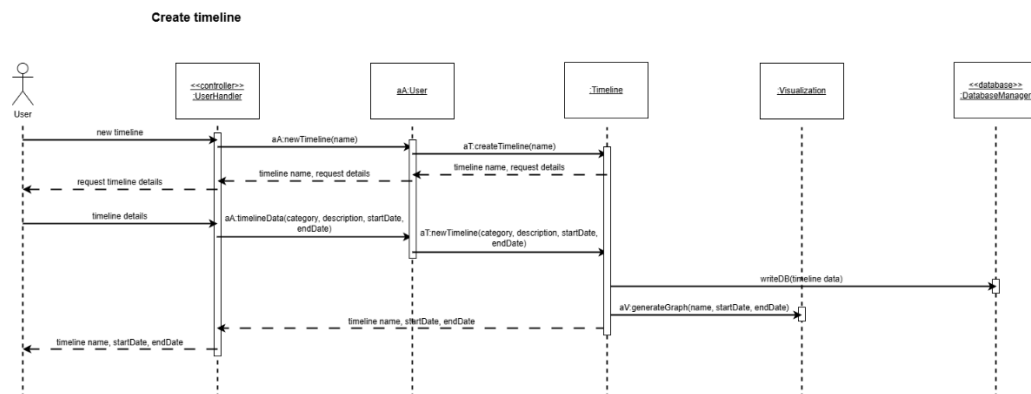

The SearchEngine class provides services and does not have a state machine diagram.

# SEQUENCE DIAGRAMS

## USE CASE 1: LOGIN TO TIMELINEXPRESS

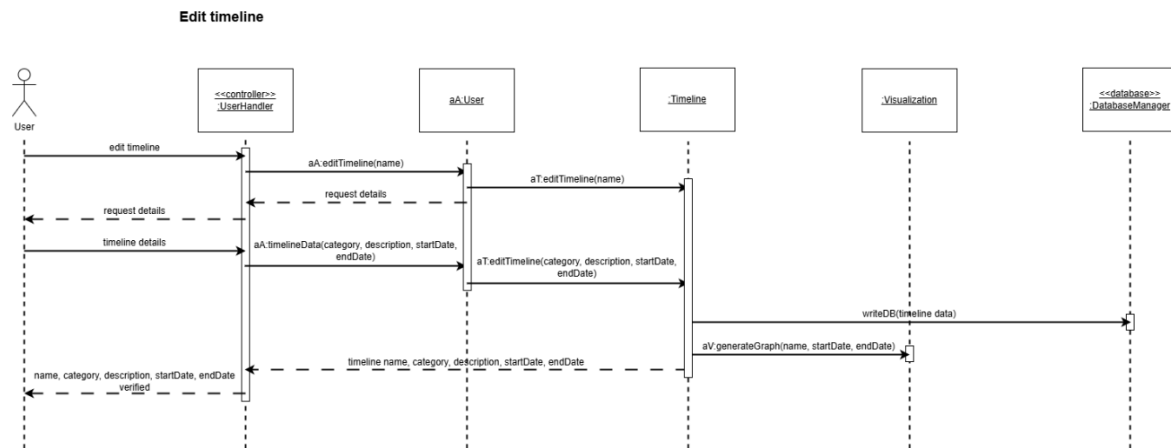

## USE CASE 2: CREATE TIMELINE

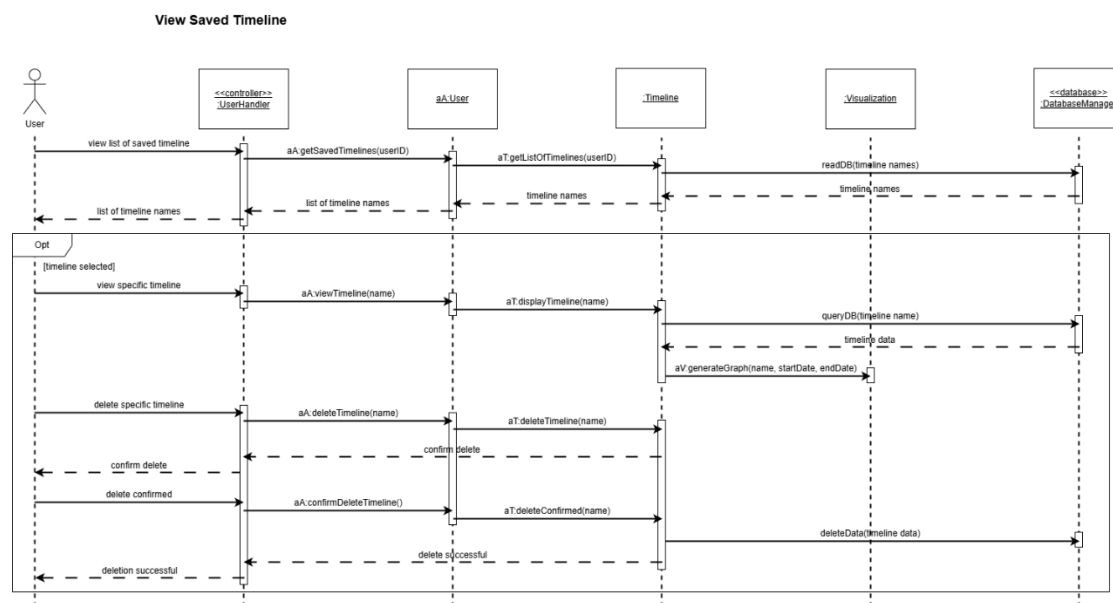

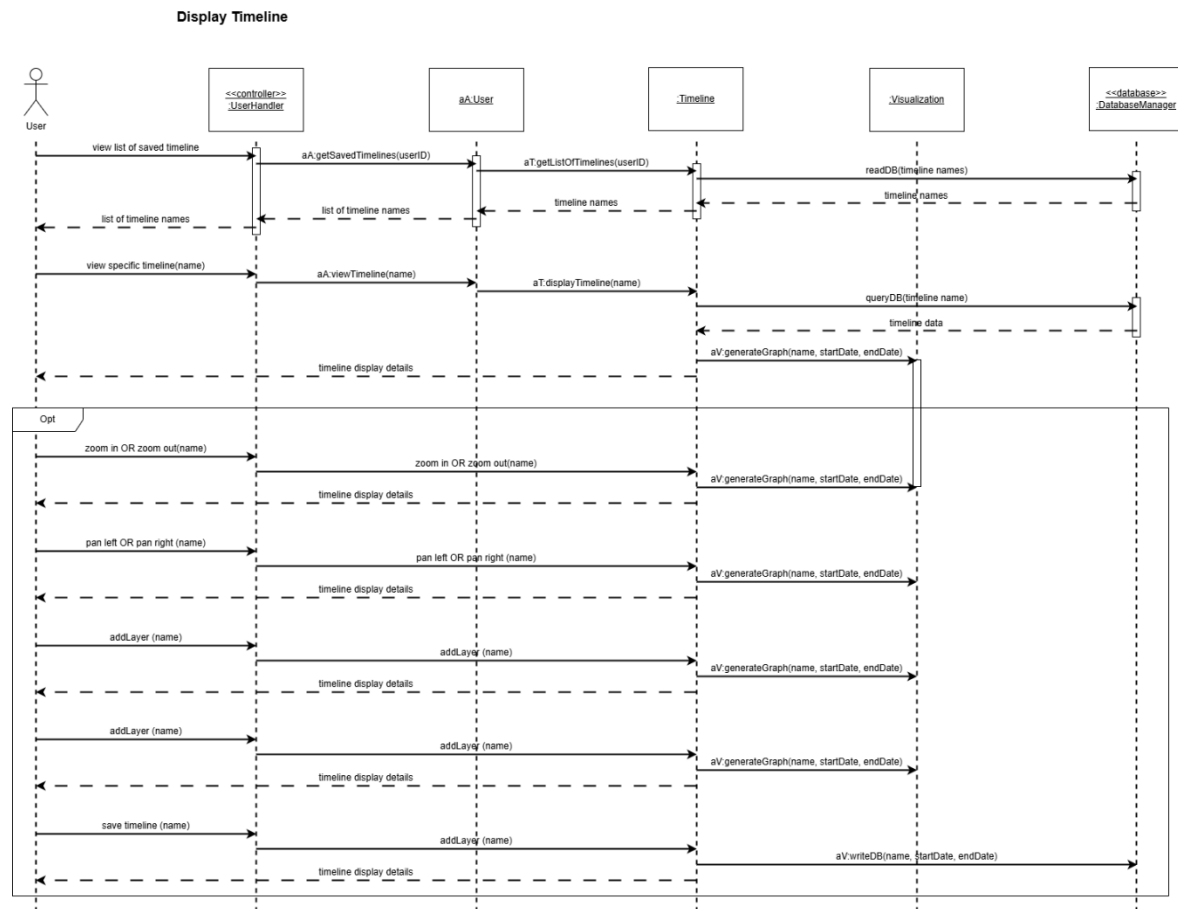

## USE CASE 3: EDIT TIMELINE

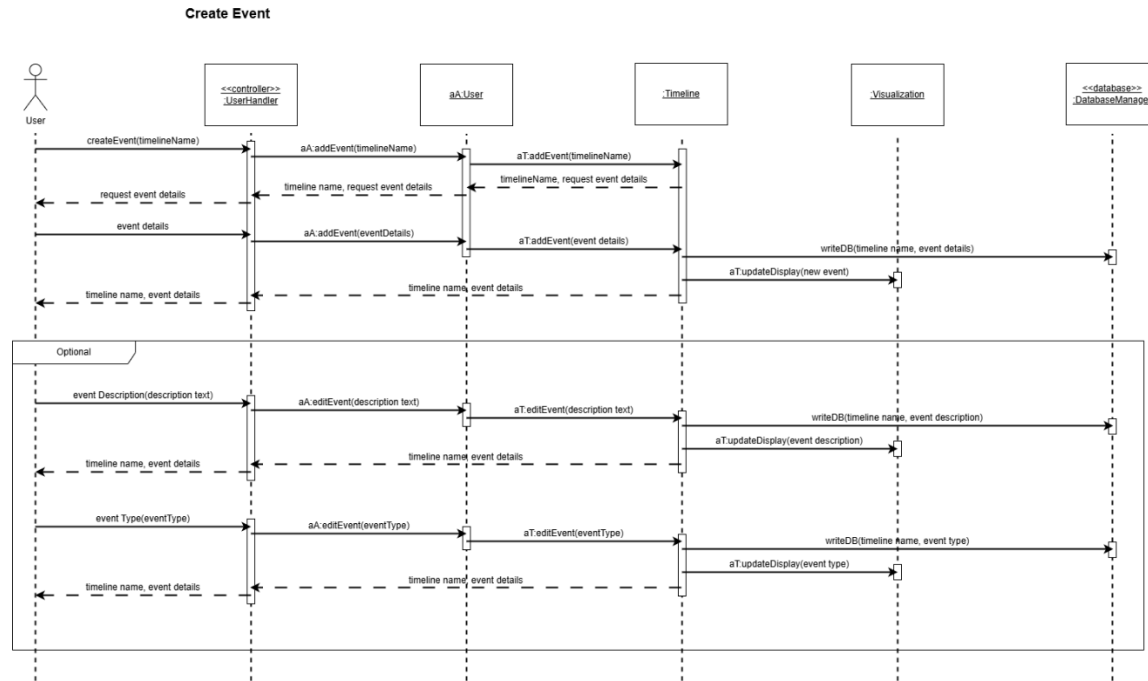

## USE CASE 4: VIEW SAVED TIMELINES

## USE CASE 5: DISPLAY A TIMELINE

## USE CASE 6: CREATE EVENT

## USE CASE 7: EDIT EVENT
